AB The reaction of 2-aminopyridine as well as 2-benzylaminopyridine hydrochloride with benzyl chlorides used in molar ratio of 1:2 and 1:1 resp. and carried out 15 250° leads via 2-benzylamino-5- benzylpyridines to 2-amino-5-benzylpyridines as the final products. The formation of 2-benzylamino-5-benzylpyridines did not occur in the direct C-benzylation reaction of the 2-benzylaminopyridine ring with the use of benzyl chloride. Its formation takes place via the intermediate state of 2-(N,N-dibenzylamino)pyridinium and 1-benzyl-2-benzylaminopyridinium chlorides for which the solvent separated ion-mol. form is proposed. Interaction of the ingredients of the intermediate state i.e., benzyl cation and 2-benzylaminopyridine, leads to an electrophilic mechanism to the formation of 2-benzylamino-5-benzylpyridine hydrochlorides. Thermolysis of the aminomethylene bond in 2-benzylamino-5-benzylpyridine hydrochlorides leads to the final 2-amino-5-benzylpyridines.

Condensation of IV with 3,5-dimethylaniline yields II. Compds. of the invention inhibit either wild-type C-Raf with IC50 values between 0.01 μM and 3.5 μM, wild-type B-Raf with IC50 values between 0.03 μM and 3.7 μM, or a mutant B-Raf (V599E) with IC50 values between 0.01 μM and 3.4 μM (no data).

AB Fused ring systems with a pyridine or pyridazine subunit, such as I [X = connecting group, such as O, S, NH, etc.; Y = connecting group, such as O, S, CH2O, CH2S, NH, OCH2, SCH2, SO, SO2, etc.; Z = CH, N; R1R2 = fused ring, such as CH:CHCH:CH, CH:CHS, CH:CHO, CH:CHNH, N:CHNH, N:NNH, etc.; R3, R4 = aryl, heteroaryl, etc.; XR4 = nitrogen bound heterocyclyl, such as 1-indolinyl], with angiogenesis inhibiting activity were prepared for pharmaceutical use as antitumor agents. Thus, substituted isoquinoline II was prepared in a 3 step sequence which included bromination of isocarbostyril to form 1,4-dibromoisoquinoline in 96% yield, followed by monoamination with 4-chloroaniline to give 4-bromo-N-(4-chlorophenyl)-1- isoquinolinamine in 64.4% yield, and subsequent reaction with 4-mercaptopyridine to give II in 19% yield. The prepared compds. were tested for KDR receptor inhibition.

Thus, 2-mercapto-5-nitropyridine was treated with NaH in DMF and then alkylated by 1-bromomethyl-4-nitrobenzene at room temperature for 1.5 h to give 2-(4-nitrobenzylthio)-5-nitropyridine which was reduced by Zn/AcOH in THF at room temperature for 16 h to 2-(4-aminobenzylthio)- 5-aminopyridine and then acylated by 2,2-dimethylcyclopropanecarbonyl chloride in the presence of Et3N in CH2Cl2 at room temperature for 17 h to give 2-(4-(2,2-dimethylcyclopropanecarbonylamino)benzylthio)-5-(2,2-dimethylcyclopropanecarbonylamino)pyridine (I). I in vitro inhibited NF-kappa B activity with IC50 of 0.015 μg/mL in an assay measuring β-galactosidase activity expressed in HUVEC cells and driven by NF-kappa B-binding sequence-fused SV40 T antigen min. promoter.
